

Trusted Time for Digital Commerce

Strengthening Transaction Integrity Across the Digital Economy

Connects the Commerce Ecosystem

- Designed to integrate with existing commerce stacks, including storefronts, marketplaces, payment gateways, order-management systems, and fulfillment platforms.
- Connects merchants, payment providers, and logistics partners through trusted chronology.
- Establishes a common timeline across the entire order lifecycle—from checkout and payment authorization through fulfillment, settlement, refunds, and chargebacks.
- Complements existing infrastructure without disrupting established transaction workflows.

Creates Trusted Transaction Evidence

- Every transaction milestone receives an independently verifiable timestamp.
- Anchors payment authorization, order confirmation, fulfillment, settlement, refund, and chargeback events to an immutable timeline.
- Preserves the complete chronology of every customer transaction.
- Gives authorized participants a consistent record for dispute resolution, fraud investigations, and transaction reconciliation.

Builds Consumer Trust

- Strengthens dispute resolution through independently verifiable transaction evidence.
- Improves transparency across merchants, payment providers, and marketplaces.
- Supports audits, fraud investigations, and operational reconciliation.
- Builds confidence without changing existing commerce infrastructure.

Clockchain creates an independent, cryptographically verifiable timeline for digital commerce—allowing any authorized party to prove not only what happened, but precisely when it happened.

Every Transaction Tells a Story. Clockchain Verifies the Timeline.
